

HarborDesk release delivery brief

Version 2.4.1 | Approved example revision R3

This fictional brief is the approved editable source for a two-page PDF delivery exercise. It records the release scope and the recipient checks that must survive export. No real release or customer approval is represented.

Release decision

Approve the 25-seat internal pilot only. General availability remains on hold until the screen-reader review is complete. The PDF must preserve this condition; passing the smoke tests does not remove it.

Package HD-0241-R3 was approved for this example on 2026-10-01 at 16:00 UTC. The package label and revision must match on both pages.

Recorded smoke tests

These fictional results cover one test run per platform. They do not establish reliability across all devices or accessibility conformance.

Platform	Passed	Failed	Build identifier
Windows 11 x64	18	0	HD-0241-WIN
macOS 14 ARM64	14	0	HD-0241-MAC
Ubuntu 24.04 x64	12	0	HD-0241-LNX
Total	44	0	3 platform runs

Arithmetic check: 18 + 14 + 12 = 44 passes; 0 + 0 + 0 = 0 failures.

Exact strings to preserve

Copy checks: Zoë; café; Δ latency = −12 ms; 99.5%; ticket HD-1847; version v2.4.1+rc.03. Accents, the Greek delta and the minus sign have meaning in this exercise.

Reference: [Approved rollout checklist](#)

Recipient delivery checks

Keep this checklist on page 2, with the same package identifier and a correct page number. A PDF that opens but omits this page is incomplete.

Before starting the pilot

1. Confirm the package is HD-0241-R3 and the release is version 2.4.1.
2. Limit access to the 25-seat internal pilot. General availability remains on hold.
3. Retain the editable source alongside the PDF so a later wording change can be exported again.
4. Copy ticket HD-1847 from the PDF and check the exact spelling of Zoë and café.

Known unresolved work

The screen-reader review is still pending. No accessibility, PDF/UA, archival or cross-platform compatibility claim is approved. The smoke-test total must not be rewritten as evidence for any of those claims.

If the source changes after this export, produce a new candidate and repeat the checks. Do not replace this revision without a fresh comparison.

Where to report a mismatch

Use the fictional [delivery issue template](#) to describe the page, expected text and observed difference. The example checks link targets without visiting them.

End of approved example revision R3. Delivery boundary: two pages, one data table, two external links and no attachments.
